Mathematical Console

SigmaConsole is an advanced mathematical console. It supports the most common and useful functions. It's easy to use: to evaluate an expression, simply write it, using operators (+ - * / ^), parenthesis and mathematical functions and press ENTER. You can also use the numeric keypad to enter numbers and operators. You can set variables (with any non-reserved name), using fundamental constants, etc. The **SigmaConsole** menu gives you an easy way to use the software functionality.

SigmaConsole is a component of SigmaGraph.

The following mathematical functions are supported:

<code>exp(x)</code>	// exponential
<code>ln(x)</code>	// natural logarithm
<code>log(x)</code>	// decimal logarithm
<code>log2(x)</code>	// base-2 logarithm
<code>pow(x,n)</code>	// x^n
<code>sin(x)</code>	// sine
<code>cos(x)</code>	// cosine
<code>tan(x)</code>	// tangent
<code>asin(x)</code>	// arc sine
<code>acos(x)</code>	// arc cosine
<code>atan(x)</code>	// arc tangent
<code>sinh(x)</code>	// hyperbolic sine
<code>cosh(x)</code>	// hyperbolic cosine
<code>tanh(x)</code>	// hyperbolic tangent
<code>abs(x)</code>	// absolute value
<code>sqrt(x)</code>	// square root
<code>ceil(x)</code>	// ceiling, the smallest integer not less than x
<code>floor(x)</code>	// floor, the largest integer not greater than x
<code>int(x)</code>	// integer part of x
<code>fmod(x,y)</code>	// x modulo y
<code>erf(x)</code>	// error function
<code>j0(x)</code>	// Bessel function of x of the first kind of order 0
<code>j1(x)</code>	// Bessel function of x of the first kind of order 1
<code>jn(n,x)</code>	// Bessel function of x of the first kind of order n
<code>y0(x)</code>	// Bessel function of x of the second kind of order 0

```
y1(x)                                // Bessel function of x of the second kind of order 1
yn(n,x)                                // Bessel function of x of the second kind of order n
bern(x)                                 // Bernoulli function: x / (exp(x) - 1)
gauss(x,μ,σ)                            // Gauss function: exp((x - μ)2 / 2σ2)
lorentz(x,μ,σ)                           // Lorentz function: σ / ((x - μ)2 + σ2)
hypot(x,y)                             // hypotenuse, sqrt(x2 + y2)
min(x,y)                               // smallest value of x and y
max(x,y)                               // largest value of x and y
rand(x)                                 // random number between 0 and 1 (if x ≠ 0 then initialize the generator)
time()                                  // elapsed time in seconds since January 1, 1970
sign(x)                                 // sign of x (-1 if x < 0, +1 if x > 0 and 0 if x = 0)
exp2(x)                                 // 2x
log2(x)                                 // logarithm base 2
cbrt(x)                                 // cubic root
hypot(x,y)                             // sqrt(x2+y2)
erf(x)                                  // error function
erfc(x)                                 // complementary error function
lgamma(x)                               // ln(gamma(x))
tgamma(x)                               // gamma(x)
trunc(x)                                // nearest integer
round(x)                                // nearest integer, rounding
rint(x)                                 // rounds the floating-point to an integer
```

Constants:

```
Pi                                     // π
_q                                     // electron charge
_m                                     // electron mass
_k                                     // Boltzmann constant
_h                                     // Planck constant
_c                                     // speed of light in vacuum
_e                                     // vacuum permittivity
_n                                     // Avogadro constant
```

Commands:

```
format short                          // set the numerical format to short
format long                           // set the numerical format to long
help                                   // show help
exit                                  // exit the application
```

Specifications

SYSTEM REQUIREMENTS

SigmaConsole runs on PC with Windows™ XP, Vista or Windows 7/8/10 installed.

The basic hardware requirements are:

- Pentium or better microprocessor.
- 256 MB RAM.
- 2 MB of hard disk space.
- VGA monitor with 800x600 or higher resolution.
